AFP RAPID TEST

RAPID SCREENING FOR NEURAL TUBE DEFECTS

Alpha-Fetoprotein (AFP) is normally produced during fetal and neonatal development by the liver, yolk sac and in small concentrations by the gastrointestinal tract. In general, normal adults have serum AFP concentrations of less than 10 ng/mL. Elevated AFP levels occur in several malignant diseases including hepatocellular carcinoma, testicular nonseminomatous origin, and occasionally of other entodermal origin. AFP has also been used to detect early tumors in people at high risk for liver cancer. Detection of elevated AFP levels can also be used in the detection of fetal open neural tube defects.

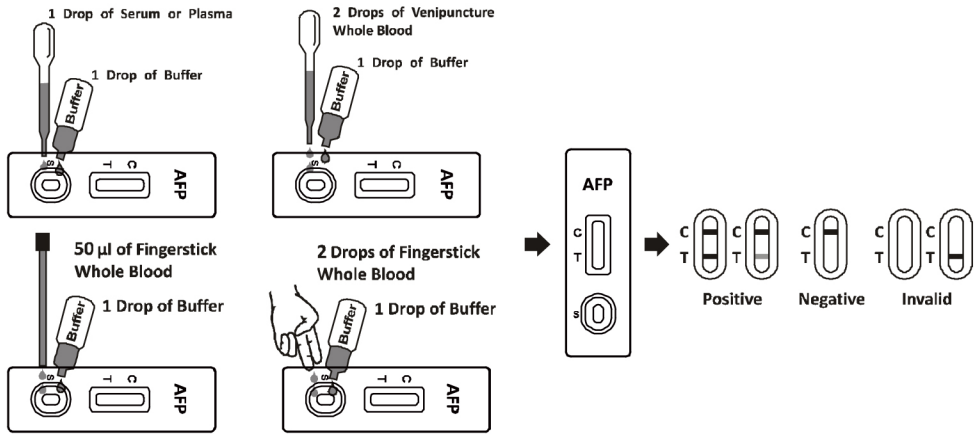

Ordering Information

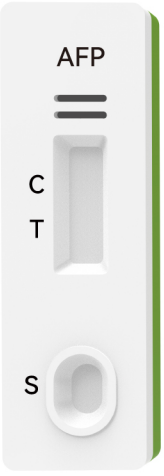

Cat. No.: SIC-RDT-AFP-202078
Product: AFP Rapid Test
Specimen: WB/S/P
Format: Cassette
Kit Size: 25 T

Product Advantages

- ✓ Fast results in **10** minutes
- ✓ Easy visually interpretation
- ✓ High Accuracy

Convenient Procedure

Sicuro Bioengineering Ltd.
Address: 19 East West Road, Port Harcourt - Nigeria
Email: info@sicurobio.com
