# CMV IGG/IGM RAPID TEST

## RAPID CMV DETECTION TO PREVENT CONGENITAL INFECTION

Cytomegalovirus is a herpes virus. It is a leading etiological agent for congenital abnormalities and complications among those who receive massive blood transfusions and immunosuppressive therapy. About half of pregnant women who contract a primary infection spread the disease to their fetus. Infection during pregnancy may cause mental retardation, blindness, and/or deafness of the fetus.

The CMV IgG/IgM Rapid Test is a rapid chromatographic immunoassay for the qualitative detection of IgM and IgG antibodies to CMV in whole blood, serum or plasma specimens.
