DENGUE NS1 RAPID TEST

RAPID DETECTION AT THE ONSET OF FEVER

Dengue is a flavivirus, transmitted by Aedesaegypti and Aedesalbopictus mosquitoes. It is widely distributed throughout the tropical and subtropical areas of the world, and causes up to 100 million infections annually. Classic Dengue infection is characterized by a sudden onset of fever, intense headache, myalgia, arthralgia and rash. NS1 exists as a monomer in its immature form but is rapidly processed in the endoplasmic reticulum to form a stable dimer. Antibodies raised in response to NS1 in viral infection can cross react with cell surface antigens on epithelial cells and platelets and this has been implicated in the development of Dengue Hemorrhagic fever.

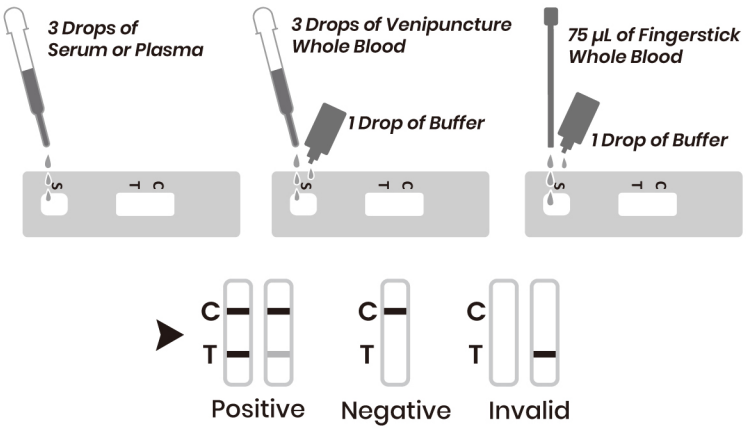

Ordering Information

Cat. No.: SIC-RDT-DNS1-202031
Product: Dengue NS1 Rapid Test
Specimen: WB/S/P
Format: Cassette
Kit Size: 10 T

Product Advantages

- ✓ Fast results in **10** minutes
- ✓ Easy visually interpretation
- ✓ High Accuracy

Convenient Procedure

Sicuro Bioengineering Ltd.
Address: 19 East West Road, Port Harcourt - Nigeria
Email: info@sicurobio.com
