

HBV COMBO RAPID TEST

COMPREHENSIVE QUALITATIVE SCREENING FOR ALL FIVE CORE HBV MARKERS

Chronic hepatitis B is a serious, debilitating illness that can cause cirrhosis of the liver, liver cancer and death. Chronic hepatitis B is the main cause of liver cancer and the tenth leading cause of death worldwide, with 400,000,000 people infected with the virus. Every year, one million people worldwide are expected to die from this infection. Most people fight off the infection themselves, but approximately 5-10 percent of those infected with the virus become carriers, and an additional 5-10 percent of those infected each year will progress to chronic liver disease, cirrhosis and possibly liver cancer.

The HBV Combo Rapid Test (Serum/Plasma) is a rapid test to qualitatively detect the presence of HBsAg, HBsAb, HBeAg, HBeAb and HBcAb in serum or plasma without the use of an instrument.

Ordering Information

Cat. No.: SIC-RDT-HBVC-202132
Product: HBV Combo Rapid Test
Specimen: S/P
Format: Cassette
Kit Size: 25 T

Product Advantages

- ✓ Fast results in **15** minutes
- ✓ Simple Procedure
- ✓ High accuracy

Convenient Procedure
