STREPTOCOCCUS PNEUMONIAE ANTIGEN RAPID TEST

A NEW STANDARD IN RAPID PNEUMOCOCCAL DIAGNOSIS

As a significant human pathogenic bacterium Streptococcus pneumoniae was recognized as a major cause of pneumonia in the late 19th century, and is the subject of many humoral immunity studies. It can be a cause of neonatal infections. S. pneumoniae is the main cause of community acquired pneumonia and meningitis in children and the elderly, and of septicemia in those infected with HIV. The organism also causes many types of pneumococcal infections other than pneumonia. These invasive pneumococcal diseases include bronchitis, rhinitis, otitis media, conjunctivitis, meningitis, sepsis, osteomyelitis, septic arthritis, endocarditis, peritonitis, pericarditis, cellulitis, and brain abscess.
